ARYA GLOBAL DIGITAL

E-Commerce Commission Structure
and Software Development Requirements

Prepared for: Unique Software Solutions

Issued by: Arya Global Digital

Purpose: Developer implementation specification

Version: 1.0 | **Date:** 31 October 2026

IMPLEMENTATION PRINCIPLE
The Rs. 750 gross commission pool is a single pool per eligible order. Plan A and Plan B are mutually exclusive distribution options. Amounts, rates and rules must be configurable by authorised administrators and recorded in an audit trail.

1. Product Price and Allocation

The allocation below applies to a product selling price of **Rs. 3,999**. Percentages are calculated against Rs. 3,999, except where a separate calculation base is expressly stated.

Allocation head	Amount	% of Rs. 3,999
Product import cost reserve	Rs. 1,500.00	37.5094%
GST reserve	Rs. 400.00	10.0025%*
Packing and courier	Rs. 150.00	3.7509%
Customer cashback	Rs. 250.00	6.2516%
Gross commission pool	Rs. 750.00	18.7547%
Gift and achievement fund	Rs. 150.00	3.7509%
Office and staff expenses	Rs. 100.00	2.5006%
Total allocated	**Rs. 3,300.00**	**82.5206%**
Net company income / balance	**Rs. 699.00**	**17.4794%**

* GST reserve rule: reserve Rs. 400, calculated as 10% of a separate Rs. 4,000 reference base. The displayed 10.0025% is its equivalent when compared with the Rs. 3,999 selling price. Show this reserve separately on the admin dashboard and maintain its accumulated balance. Do not deduct it again from the Rs. 750 commission pool.

Reconciliation: Rs. 3,999 selling price minus Rs. 3,300 total allocation equals Rs. 699 net company income / balance. The GST reserve is included in the Rs. 3,300 allocation total.

2. Commission Deduction Settings

Apply deductions separately to each recipient's gross commission. Rates must be editable in the admin panel.

Deduction / payment	Rate	Calculation base
Operational Cost	4.6667%	Each recipient's gross commission
TDS	2.0000%	Each recipient's gross commission
Total deductions	**6.6667% approx.**	**Each recipient's gross commission**
Net payable	**93.3333% approx.**	**Gross less both deductions**

Formulas

Operational Cost = Gross Commission x 4.6667%
TDS = Gross Commission x 2.0000%
Net Payable = Gross Commission minus Operational Cost minus TDS

Use full-precision rates during calculation. Round monetary ledger entries and final payments to two decimal places (paise) using one consistent, documented method. Do not prematurely round intermediate percentage values.

3. Plan A - Arya Business Partner Programme

One eligible direct business partner receives the entire Rs. 750 gross commission pool.

Recipient / item	Pool share	Gross / amount
Direct Business Partner	100.0000%	Rs. 750.00
Operational Cost (4.6667%)	-	Rs. 35.00
TDS (2.0000%)	-	Rs. 15.00
Net payable	**-**	**Rs. 700.00**

The displayed amounts are rounded to paise. The unrounded Operational Cost is Rs. 35.00025 and TDS is Rs. 15.00; the net payable rounds to Rs. 700.00.

4. Plan B - Arya Generation Growth Programme

Plan B distributes the same Rs. 750 pool among the direct referral and five eligible generations. Fixed rupee allocations are controlling; percentages are displayed to four decimal places.

Recipient	% of Rs. 750 pool	Gross amount
Direct Referral	66.6667%	Rs. 500.00
Generation 1	6.6667%	Rs. 50.00
Generation 2	6.6667%	Rs. 50.00
Generation 3	6.6667%	Rs. 50.00
Generation 4	6.6667%	Rs. 50.00
Generation 5	6.6667%	Rs. 50.00
Total	**100.0000%***	**Rs. 750.00**

* Individual percentages are rounded; fixed rupee allocations total exactly Rs. 750.00.

Recipient-level deductions: calculate Operational Cost and TDS on each recipient's own gross allocation, not only on the combined pool.

Recipient	Gross	Operational Cost	TDS	Net payable
Direct Referral	Rs. 500.00	Rs. 23.34	Rs. 10.00	Rs. 466.66
Generation 1	Rs. 50.00	Rs. 2.34	Rs. 1.00	Rs. 46.66
Generation 2	Rs. 50.00	Rs. 2.33	Rs. 1.00	Rs. 46.67
Generation 3	Rs. 50.00	Rs. 2.33	Rs. 1.00	Rs. 46.67
Generation 4	Rs. 50.00	Rs. 2.33	Rs. 1.00	Rs. 46.67
Generation 5	Rs. 50.00	Rs. 2.33	Rs. 1.00	Rs. 46.67
TOTAL	**Rs. 750.00**	**Rs. 35.00**	**Rs. 15.00**	**Rs. 700.00**

Paise reconciliation: independently rounding 4.6667% for each row would show Rs. 34.98 Operational Cost, while the rounded pool-level total is Rs. 35.00. To reconcile exactly, allocate the two-paise residual deterministically: add Rs. 0.01 to Direct Referral and Rs. 0.01 to Generation 1 Operational Cost. The resulting net amounts above total exactly Rs. 700.00. Record this adjustment visibly in the ledger; never hide or discard it.

5. Unallocated Generation Rule

If a generation is not eligible, unavailable or has no qualifying recipient, do not automatically redistribute its allocation. Apply only a separately approved company rule. Record the unallocated amount, reason, order ID and administrator action.

6. Software Development Requirements

1. Plan selection: Provide an admin option to select Plan A or Plan B for each eligible order. These are alternative distributions of the same Rs. 750 pool; never pay both plans for one order.

2. Configurable settings: Make allocation amounts, percentages, deduction rates, eligibility rules and rounding policy editable by authorised administrators, with effective dates and version history.

3. Referral mapping: Automatically identify the direct referral and eligible Generation 1-5 recipients using the approved referral hierarchy and eligibility rules.

4. Recipient calculations: Show each recipient's gross commission, Operational Cost, TDS, any rounding adjustment and net payable separately.

5. Unallocated amounts: Do not redistribute unallocated generation amounts automatically. Require an approved company rule and retain an audit record.

6. Dashboards: Provide separate admin and partner dashboards, order-wise transaction history, commission statements and payment status.

7. Payment workflow: Allow authorised admins to approve, hold and mark payments as paid. Capture payment date, mode, UTR/reference number and remarks.

8. Reports: Generate sales, allocation, GST reserve, commission, deductions, payout, unallocated commission, cancellation and refund reports.

9. Exports: Provide downloadable Excel and PDF reports with filters by date, order, partner, plan and payment status.

10. Duplicate prevention: Use unique order/commission identifiers and idempotent server-side processing to prevent duplicate commission creation or payment.

11. Audit and access: Maintain timestamped audit logs for settings changes, plan selection, approvals, holds, payouts, reversals and user actions. Enforce role-based access.

12. Financial accuracy: Perform financial calculations server-side using decimal-safe arithmetic, not binary floating-point arithmetic. Store amounts in paise or a fixed-precision decimal type.

13. Refunds and cancellations: Preserve original transactions. Process cancellations/refunds through traceable reversal entries linked to the original order; never silently edit or delete posted ledger entries.

14. Testing and handover: Test both plans, recipient eligibility, missing generations, rounding residuals, duplicate requests, partial/full refunds and payment status transitions. Provide test evidence and administrator documentation.

7. Suggested Ledger and Transaction Fields

Each order-level commission record should retain at least the following fields:

Record area	Required information
Order	Order ID, order date, product/SKU, selling price, customer reference, order status
Configuration	Selected plan, commission-pool amount, settings version, effective date
Allocation	Recipient ID, recipient role/level, eligibility result, gross allocation, allocation percentage
Deductions	Operational Cost rate and amount, TDS rate and amount, rounding adjustment
Settlement	Net payable, approval/hold status, payment status, payment date, mode and reference
Reversal	Original transaction reference, refund/cancellation amount, reversal entries, reason and approver
Audit	Created/updated timestamps, actor/user ID, before-and-after values, action reason

8. Acceptance Tests Before Delivery

1. Verify the Rs. 3,999 order allocation totals Rs. 3,300 and the remaining company balance is Rs. 699.

2. Verify the GST reserve is Rs. 400 based on the Rs. 4,000 reference base and is not deducted again from the Rs. 750 commission pool.

3. Plan A: verify gross commission Rs. 750, Operational Cost Rs. 35, TDS Rs. 15 and net payable Rs. 700.

4. Plan B: verify Rs. 500 plus five allocations of Rs. 50 equals Rs. 750; recipient-level deductions reconcile to Rs. 35 Operational Cost and Rs. 15 TDS; net payout totals Rs. 700.

5. Verify the paise residual is visible and allocated deterministically, not silently omitted.

6. Verify only one plan can be settled for an order and duplicate processing cannot create a second commission or payout.

7. Verify missing-generation amounts remain unallocated unless an approved rule is applied.

8. Verify refund/cancellation reversals preserve the original transaction and are fully traceable.

9. Tax and Compliance Note

The commission rates and calculations in this document are requested software rules, not confirmation that the specified TDS rate, GST reserve, GST treatment, invoicing treatment or tax classification is legally applicable. Before production launch, Arya Global Digital must obtain written confirmation from its accountant/tax adviser and update the system configuration if required. The software should support configurable tax rates and retain configuration history.

10. Developer Confirmation and Delivery

Unique Software Solutions is requested to review this specification and confirm in writing that the system will implement the allocation structure, both alternative commission plans, recipient-level deductions, paise reconciliation, approval workflow, reports, audit controls and reversal handling exactly as described.

Delivery must be a fully functional end-to-end system, including backend logic, database/ledger, admin controls, partner-facing features, reports, exports, testing and handover documentation - not merely a frontend or dashboard prototype.
